

TVM Introduces Twisted Top – The 360° Twistable Silicone Nozzle!

In November 2011, TVM Building Products introduced its revolutionary new 360° turn-able silicone nozzle 'Twisted Top'. TVM recently acquired North American rights for this newly patented accessory, giving the company exclusive rights for distribution within Canada, US and Mexico. This product was developed with the professional contractor and D-I-Y consumer in mind, realizing the countless hard to reach areas that are often limited by a straight silicone top. Designed to replace all removable sealant nozzles for caulks, silicones, and adhesives, 'Twisted Top' truly is the most versatile accessory in the market today.

TVM's Twisted Top is adaptable to any sealant, caulk, or adhesive tube with a detachable nozzle. Twisted Top is an all-in-one product that will perform all the functions of a straight nozzle, while also giving access to typically unreachable areas. The durability of this product is incomparable, built to withstand even the most unrelenting worksites.

Unlike conventional sealant nozzles, Twisted Top gives the user complete satisfaction when trying to reach unattainable areas such as;

- In and around small Corners
- Behind Toilets
- Underneath sinks
- Tops of doorways
- Around shelves and unmovable objects
- Piping and Plumbing
- And the list goes on at www.tvmi.com

TVM's Twisted Top, the industry's only multi-purpose 360° twistable silicone nozzle!

About TVM

TVM provides the products that insulate and seal your buildings.

Leaders in Spray Foam Insulation, Reflective Insulation, Radiant Barriers, Sealants, Foams, Tapes and related accessories, TVM can service all of your needs.

With multiple shipping locations, national technical and sales support we can provide the innovative solution for your next project.
